

Clinical Evaluation of Velvet Antler

Canadian Veterinary Journal - February 2004 (Also reported on CNN and other media outlets)

Clinical Evaluation of Velvet Antler for Treatment of Osteoarthritis in Dogs

The University of Montreal (Quebec, Canada) Maxim Moreau, Jacques Dupuis, Norbert H. Bonneau, Manon Lecuyer

In a university conducted study elk (deer) antler velvet was evaluated on a group of dogs with osteoarthritis in a clinical double blind and placebo-controlled study. One group of dogs received a placebo for 30 days then Antler Velvet for 60 days. The second group received Velvet for 60 days. During the study a force plate measured gait analysis and an Orthopaedic Surgeon assessed clinical signs. The performances in daily life activities and vitality was assessed by the dog owners and complete blood analysis's were obtained at day 0, after 30 days of placebo and after 60 days of being on Antler Velvet.

The study found that, of the first group of dogs none showed any improvement after being on the placebo for 30 days but after being on Velvet their gait, their performances in daily life activities and their vitality were significantly improved. The second group that was only on Velvet showed similar improvements. No clinical changes were revealed in the blood analyses.

Overall the study found the administration of Velvet was effective in alleviating the condition in arthritic dogs.

The Canadian Veterinary Journal, published by the Canadian Veterinary Medical Association, is the 'voice of veterinary medicine in Canada'. This monthly, peer-reviewed general scientific publication features a wide variety of articles and regular columns intended for the veterinary practitioner

Velvet AGILITY

Help your pet feel young again

An all natural supplement that relieves
sore joints, enhances **mobility**,
increases **energy**, and revitalizes **playfulness**.

Effective for dogs & cats with osteoarthritis

100% Money Back Guarantee.

Relief Without Side-effects.

Velvet Agility is an all-natural holistic supplement for your dog or cat. It helps rebuild joint cartilage, increases muscle efficiency, lubricates joints, improves circulation and increases energy levels. **Velvet Agility** also helps regulate bone growth, relieves arthritic symptoms, aids tissue healing, promotes resistance to disease and injury, and strengthens teeth and bones.

Velvet Agility is not a synthetic pharmaceutical formula. It is a natural supplement made from New Zealand farm raised deer velvet antler that has been verified in clinical trials to be safe and effective, without the harmful side-effects of many over-the-counter and prescription animal drugs.

Velvet Agility is a powerful combination of pure New Zealand velvet antler and other natural ingredients that has been scientifically proven to enhance mobility and vitality.

Millions of people have used deer velvet antler for thousands of years for vitality and strength. Now your pet can enjoy the same advantages.

What Vet's Say.

“With velvet antler we’ve seen dramatic improvements that can’t be dismissed. And velvet antler doesn’t create the kind of problems we often see with traditional heavy-hitter arthritis drugs that can cause liver damage, kidney damage, bleeding ulcers, and a host of other problems. Velvet antler is at the top of my list when it comes to treating pets with arthritis and joint pain”.

the top of my list when it comes to treating pets with arthritis and joint pain”.

Dr Clint Balok, DVM

Cedar Animal Medical Center

“From a medical point of view velvet antler has shown a very positive effect on fracture healing, arthritis therapy, surgery recovery and overall wellness, including improved energy and vitality. Anyone who truly cares about their pets will give them velvet antler—it ensures the animals will live a healthier, happier and pain-free life”.

Dr DeGrofft, DVM

Loveland, Colorado

We are so confident about the positive effects of Velvet Agility we offer a 100% money back guarantee.

What Pet Owner's Say.

“Pogo (9 year-old Dachshund) has suffered for several years with spinal arthritis. The drugs he was on, including steroids, made little difference. I was ready to put him to sleep. Since starting him on **New Zealand deer velvet** he is a new dog. He is happy, runs all over and barks. He certainly feels like himself again”.

Phyllis Scoopmire

New Zealand deer velvet has helped my dogs endure the long racing season with fewer injuries and strong performances. We were so impressed with the results on the dogs that we started taking the human formula ourselves”.

Dori Hollingsworth, World champion Sled Dog Racer

“Desi (10 year-old Rhodesian Ridgeback) was extremely crippled in her legs. We tried all the different arthritis medications with limited results. She has now been on **New Zealand deer velvet** for four months and acts more like a puppy than the old dog she is. It’s wonderful”.

John Cottonero

“Tierra (11 year-old Australian Shepherd) had terrible x-rays showing almost no normal hip joints left. She has been on **New Zealand deer velvet** for over three months and is doing great now. Also, I have not noticed any side effects to the product”.

Tess Langham
